

## PACKAGE BURNERS

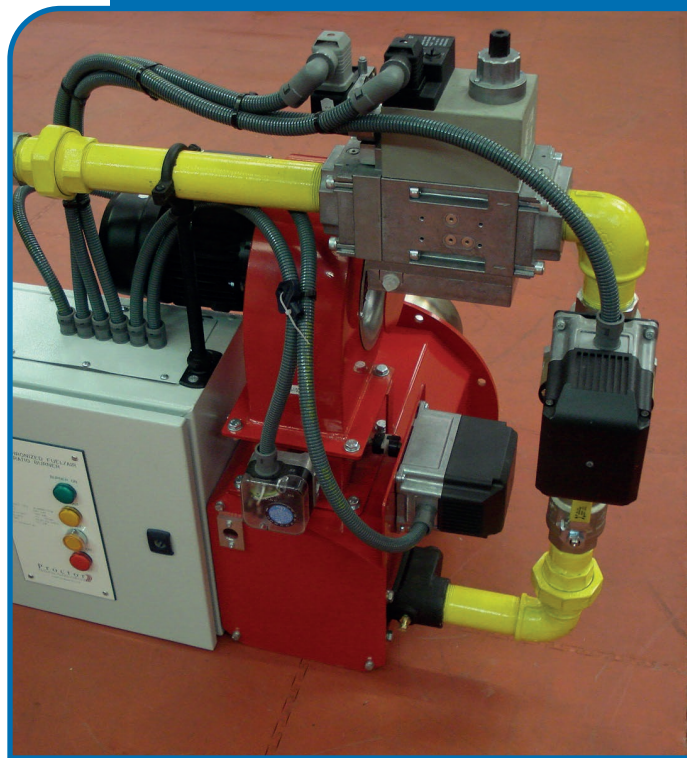

The 3PXSA, 3PMAL and 3PMAR range of nozzle mix gas burners are industrial package burners specially designed to offer cost effective and efficient heating solutions to a huge range of thermo-processing industries.

The simple design combined with the use of the highest quality, proven out-sourced components, allow this range of burner to give complete reliability regardless of the process.

All P series burners come pre-assembled with burner head, combustion air fan, gas train, electrical control panel and all associated safety equipment pre-wired and fully tested, so little or no on-site commissioning is required.

Each burner can be individually tailored to suit any requirement from installation constraints, high chamber pressures, hazardous environments or specialist voltages and frequencies for the overseas market.

- **Robust industrial design for total reliability**
- **Ideal for direct firing or heat exchanger applications**
- **Excess air or fully modulating with ration or linkage available**
- **Outputs range from 50 to 4000kW**
- **Up to 40 : 1 turndowns**
- **On/Off, high low or modulating outputs**
- **Natural Gas, Propane or LPG mix**
- **Specialised overseas approvals, voltages and frequencies**
- **Simple to install with minimal maintenance requirements**
- **Fully tested and pre-commissioned**

## PRODUCT APPLICATIONS

Industrial Continuous and Batch Ovens  
Automotive Body Curing  
Paint Curing  
Carpet Backing  
Space Heaters  
Converting Industries  
Textile Drying  
Spray Dryers  
Rotary Dryers  
Rotary Moulding  
Baking and Foodstuffs  
Web Treatment
